# the security of constant connection

It's your job to ensure that your store premises, property, and people are constantly protected. But without a reliable, always-on link between your alarm panel and monitoring service, your system can't really do the job.

## BETTER COMMUNICATION MEANS MORE PROTECTION

Most security systems rely on "dial-up" connections — traditional phone lines — as the communication link to your monitoring service. But where you have the ability to add communication links, the DMP XT Series™ Panel lets you include Internet and cellular GPRS links, either in addition to or instead of dial-up.

Together, we can help you can select the optimum communications strategy for your stores and your business. Whether you experience downed wires or you need protection against the possibility of wires being intentionally cut, the XT Series Panel enables you to stay constantly connected and continuously protected.

With multiple communication options configured, you can feel confident that when your system detects trouble and the panel calls for help, the message will get through and the appropriate response will be initiated.

## COMPACT BUT POWERFUL

When it comes to security system panels, size matters. Space is typically tight in retail stores, so you don't want an oversize panel that requires a large closet or covers a wall. Besides the space considerations, smaller panels are more discreet and can be more easily hidden.

The XT Series Panel provides an impressive range of security features and functions in a panel that's surprisingly compact. As an added benefit, the communication options for the XT Series are all mounted on-board. There's no need for additional enclosures that require more wall or closet space.

## THE WIRELESS ADVANTAGE

In addition to multiple communication options, the XT Series Panel also includes built-in premises wireless capability. With wireless sensors — motion detectors, door and window switches, and other

Depending on your monitoring service, you can receive email or text messages from your alarm system.
