

Our certified installers and service technicians receive the latest factory training on every product—and we're on call day or night to ensure quality service when you need it.

security that's easy to live with.

Because new system components are backward compatible, you can upgrade or expand your security as your needs change. Instead of starting over with a new system to take advantage of new features, you can build on what you already have, saving time and money. Large system or small, every component is designed, manufactured, and tested in the USA to meet the highest quality standards in the electronic security industry.

Clear Touch™ glass keypad provides ease of operation and enhanced visual communication.

SIMPLE KEYPAD OPERATION

Keypad menus guide users through system operation and settings for Home, Sleep, or Away to make operation easy for the entire family. Your system can arm or disarm according to your schedule—days, evenings or weekends—so you always have the best level of security. Keypad backlighting changes from blue to red during an alarm and distinct sound patterns indicate type of alarm providing users with both a visual and audible alert. When the alarm sounds, you can turn off the audible notification without turning off the system – so the system continues reporting (when monitored).

PROX PATCH CODE-FREE ARMING IS LIKE NO OTHER

The Prox Patch is a unique adhesive patch you can easily adhere to any accessory—like a wallet or cell phone—turning it into a code-free access control wand. Just wave the patch in front of your keypad's built-in reader for codeless, keyless arming and disarming. System operation can't get any easier than that!

CONVENIENT REMOTE CONTROL OPTIONS

Remote control key fobs provide another option for arming and disarming your system and sending panic alarms when needed. Wireless fobs are portable and attachable to your key ring for convenient code-free system control.

"Home" setting allows you to arm the perimeter of your property and move about freely inside.

"Sleep" mode arms the exterior of the property and designated interior spaces, allowing movement in disarmed areas.

"Away" setting arms the entire premise, both exterior and interior.

"Bypass" mode allows you to ignore a part of the protected area, such as a patio, while the system remains armed.
